

Certificate of Course Completion

Cisco Networking Academy®
Mind Wide Open™

CCNA 1 Networking Basics

During the Cisco® Networking Academy course, administered by the undersigned instructor, the student was able to proficiently:

- Identify and describe IP Address Classes
- Proficient in IP address subnetting techniques
- Describe the purpose of the OSI Model and the functions of each layer
- Describe the process of data encapsulation
- Describe and apply CAT 5 cabling standards
- Proficient in planning, designing, and installing work group and peer-to-peer LAN's
- Describe the purpose of the TCP/IP Protocol Stack (DoD Model) and the functions of each layer
- Proficient in detailing the specifications of Ethernet
- Identify and describe Ethernet families (10BaseT, Fast Ethernet)
- Describe the function of MAC addresses

Certificate of Course Completion

CCNA 2 Router and Routing Basics

During the Cisco® Networking Academy course, administered by the undersigned instructor, the student was able to proficiently:

- Identify the important characteristics of common WAN configurations and technologies, and describe the role of a router in a WAN
- Identify the major internal and external components of a router and describe the associated functionality
- Describe the purpose and fundamental operation of the router operating system (IOS)
- Perform, save, and test router configurations
- Identify, configure, and verify the use of static and default routes
- Evaluate the characteristics of routing protocols
- Identify, analyze, and troubleshoot simple distance vector routing protocols
- Use the commands incorporated within Cisco IOS Software to analyze and rectify network problems
- Describe the operation of the major transport layer protocols and the interaction and transportation of application layer data
- Analyze, configure implement verify and rectify access control lists within a router configuration

CCNA 3 Switching Basics and Intermediate Routing

During the Cisco® Networking Academy course, administered by the undersigned instructor, the student was able to proficiently:

- Use Variable Length Subnet Masking (VLSM) techniques to design and implement effective and efficient IP addressing
- Describe, configure, verify, analyze, and troubleshoot the RIP v2 and EIGRP routing protocols.
- Describe the concepts and techniques of link-state routing and compare and contrast with distance vector routing.
- Describe, configure, verify, analyze, and troubleshoot the OSPF protocol in a single area mode of operation.
- Troubleshoot routing protocol problems, specifically using and interpreting the show and debug commands.
- Describe and compare the concepts, operations and techniques used within Ethernet switched LANs.
- Describe, configure, and administer Cisco LAN Switches.
- Design a simple LAN using layered techniques.
- Compare and contrast various forms of redundancy built into networks, and describe the operation and implementation of the spanning-tree algorithm.
- Describe, configure, administer, and troubleshoot VLANs, InterVLAN Routing and VLAN Trunking.

Fundamentals of Wireless LANS

During the Cisco® Networking Academy course, administered by the undersigned instructor, the student was able to proficiently:

- Design a logical WLAN architecture for mobile wireless users in compliance with 802.11 IEEE standards
- Demonstrate knowledge in WLAN applications as they relate to EM spectrum, radio wave propagation, modulation techniques, and frequency and channel usage in wireless technologies
- Installation of in-building and building-to-building WLANs with Cisco devices that meet mobility and throughput specifications including the site survey and documentation
- Perform hardware setup and software configuration of Cisco Aironet APs and antennas for Ethernet/Radio ports and services
- Perform hardware setup and software configuration of Cisco Aironet equipment for Ethernet/Radio ports and services specific to the WLAN needs for Access Points, Bridges,, repeaters, and Site Survey Client functionality
- Upgrade and distribute firmware on Cisco wireless products throughout a WLAN
- Identify, define features of, and install, directional and omni directional antennas in both building-to-building and in-building WLANS
- Design and setup of WLAN security suing WEP, Cisco LEAP, and 802.1x protocols
- Troubleshoot WLAN performance issues using event loggings, command line utilities and diagnostic tools
